Unit number and title	Unit 7: Mobile Apps Development
	B: Design a mobile app that utilises device
Learning aim(s) (For NQF	Functions
only)	C: Develop a mobile app that utilises device
	functions
Assignment title	Design and develop a mobile app
Assessor	
Issue date	
Hand in deadline	

Vocational Scenario or Context	You work as a junior programmer for a sustainability charity which raises awareness of all sustainability issues. You have been asked to develop a mobile app which will help users to understand the importance of sustainability. The app should provide information about sustainability issues around the world and what can be done to address these issues. There needs to be video content demonstrating the importance of sustainability and possibly a game where the user must answer a series of simple sustainability multiple choice questions.
	Each game should have 10 questions and the app should keep track of the score. The app should include suitable graphics and sounds (e.g. applause when a correct answer is entered) to make it more engaging for the users.

requirements outlined in the scenario. You need to: • Create a comprehensive design for the mobile app which is suitable for multiple devices and considers alternative aspects of the design. The design should include user requirements, visual designs and technical documentation • Review your design with at least two other people in order to help you refine and improve it

Write a justification of the design decisions you have made showing how they have helped ensure the app will meet the requirements identified in the scenario

- Create the app, based on your design
- Test the app using a number of different methods including the test plans you created during the design and feedback from users. You should document your tests showing that important problems and errors have been identified and addressed
- Gather and analyse feedback on your completed app from other people and use it to optimise your app and produce an updated version
- Write an evaluation of the design, development, maintenance and optimisation of your app, considering the completed app's effectiveness in comparison to alterative solutions, the reasons why your solution was chosen and the extent to which it meets the requirements in the scenario. Your evaluation needs to be supported by evidence form all stages of the project and it needs to reach conclusions and suggest future developments

Present evidence that you have shown individual responsibility, effective time-management in your design and development of a mobile app, making high-quality justified recommendations and decisions. For example, you need to show how you have:

- Planned and managed your time and met targets.
- Reviewed and responded to outcomes including the use of feedback from others
- Behaved appropriately while completing the assignment – including professionalism, etiquette, supportive of others, timely and appropriate leadership, accountability and individual responsibility
- Evaluated outcomes to help inform high-quality justified recommendations and decisions
- Used appropriate methods of communication effectively

Checklist of evidence required

- Design documentation
- Feedback on the design collected from others
- Improved version of the design
- Written justification of design decisions
- Completed app, including code listing and screen shots of the app working
- Test documentation and user feedback
- Analysis of feedback and evidence of optimisation of the app to produce and updated version
- Evaluation of the design, development and optimisation process.
- Evidence that you have shown individual responsibility, effective time-management and made high-quality justified recommendations and decisions

Criteria covered by this task:

Unit/Criteria reference	To achieve the criteria you must show that you are able to:
7/BC.D2	Evaluate the design and optimised mobile app against client requirements.

7/BC.D3	Demonstrate individual responsibility, creativity and effective self- management in the design, development and review of a mobile app.
7/B.M2	Justify how decisions made during the design process ensure the design for the app will meet identified requirements.
7/C.M3	Optimise a mobile app that meets the design criteria.
7/B.P3	Produce designs for a mobile app to meet identified requirements
7/B.P4	Review the mobile app designs with others to identify and inform refinements.
7/C.P5	Produce a mobile app that meets the design criteria.
7/C.P6	Test a mobile app for functionality, usability, stability and performance
7/C.P7	Review the extent to which the mobile app meets the identified requirements
